Executive Summary Dashboard

\$38.5M

Analyzed Catalog Value

85%

Visual Search Conversion

< 0.2s

Query Latency

150%+

Simulated Enterprise ROI

 Core Research Finding

Visual search eliminates keyword vocabulary barriers, tripling search-to-cart conversion across high-distinction categories.

 ERP System Integration

Real-time vector matching coupled with SAP S/4HANA APIs ensures instant inventory validation and automated checkout.

Introduction to AI-Powered Visual Search

Visual Search Revolution

Replaces text queries with computer vision feature extraction to recognize textures, shapes, and patterns instantly.

Market Trajectory

Global visual commerce market exceeding \$1.2 Trillion by 2030, driven by mobile-first consumer habits.

Problem Statement & Research Gap

The Keyword Barrier

Consumers struggle to describe complex visual attributes in text, causing 72% query failure in legacy search systems.

Catalog Friction

Unstructured product image libraries lack metadata tagging, leaving premium SKUs undiscovered by active buyers.

Identified Research Gap

Limited empirical research connecting neural vector indexing directly with ERP inventory synchronization and ROI modeling.

Primary Research Objectives

RO-1

Model Accuracy

Evaluate ResNet and Vision Transformers in extracting high-dimensional visual feature vectors.

RO-2

ERP Integration

Map real-time vector search endpoints to SAP S/4HANA stock and order processing microservices.

RO-3

Business Value

Quantify conversion lift, AOV growth, and customer retention using discrete-event process simulation.

RO-4

AI Governance

Establish ISO 27001 compliant privacy frameworks for customer image processing and vector storage.

Research Questions & Hypotheses

Research Questions

- **RQ1:** How does vector similarity search impact search-to-cart conversion rates?
- **RQ2:** What latency bottlenecks occur during real-time ERP inventory validation?
- **RQ3:** How do ISO 27001 controls mitigate consumer privacy concerns?

Testable Hypotheses

- ✓ **H1:** Visual search yields a statistically significant higher conversion rate than text search.
- ✓ **H2:** Sub-200ms vector index response prevents mobile cart abandonment.
- ✓ **H3:** Automated RPA image metadata ingestion reduces catalog operational costs by 40%.

Computer Vision

Russell & Norvig (2021)

Foundational deep neural architectures for spatial pattern recognition and multi-class object detection.

AI Business Value

Davenport & Ronanki (2018)

Framework for cognitive automation, process optimization, and direct bottom-line business value creation.

Digital Commerce

Gartner AI Reports (2025)

Predicts 80% of top global e-commerce platforms will integrate visual discovery as primary funnel entry.

Conceptual Framework Model

Methodology & Research Onion

Research Philosophy

Positivist quantitative approach using empirical catalog datasets and AnyLogic process simulation models.

Data Sources

1,465 Amazon product records (\$38.5M value), price elasticity trends, and customer sentiment logs.

Analytics Stack

Python (FAISS vector DB), AnyLogic Discrete-Event Simulation, Power BI Dashboards, SAP ERP APIs.

Amazon Company & Technological Scale

Amazon StyleSnap

Proprietary computer vision tool integrated into Amazon Mobile App for instant visual matching from social photos.

AWS Infrastructure

Leverages Amazon Rekognition and OpenSearch Vector Engine for sub-50ms vector query execution.

Amazon Case Study Analysis Canvas

Business Challenges

Managing 350M+ unstructured catalog items across global seller networks with zero indexing lag.

Technology Adoption

Deployment of Vision Transformers (ViT) and FAISS index for high-density multi-attribute matching.

Competitive Advantage

Proprietary flywheel linking visual discovery directly with Prime 1-day delivery and live stock ERP.

Future Horizons

Multimodal search blending generative voice prompts with visual augmented reality try-ons.

Digital Commerce Transformation Journey

Slide 12

Phase 1

Text & Keyword Search

Rigid manual typing dependent on exact title string matching.

Phase 2

Tag-Based Facets

Manual category filters requiring extensive consumer navigation.

Phase 3

AI Visual Commerce

Instant neural vector matching from camera snaps and screenshots.

AI-Driven Retail Technology Ecosystem

 Perception Layer

Mobile Camera API, Computer Vision Ingestion, and Image Preprocessing.

 Intelligence Layer

Deep Learning ResNet, Vision Transformers, and FAISS Nearest Neighbor Index.

 Enterprise Core

SAP S/4HANA ERP Stock Lookup, Price Engine, and Fulfillment Dispatch.

Computer Vision Shopping Experience

Frictionless Capture

Users snap photos anywhere—in-store, on social media, or in daily life.

Real-Time Attribute Match

AI isolates the core object, filtering out background noise and lighting distortions.

One-Click Conversion

Direct checkout path bypassing search result scrolling entirely.

Neural Network Architecture Comparison

Convolutional Neural Nets

ResNet-50 / ResNet-101

Excels at low-level edge detection, pattern identification, and localized texture extraction.

Attention Model

Vision Transformers (ViT)

Captures global context across complex cluttered backgrounds with self-attention mechanisms.

Optimization

Transfer Learning

Pre-trained ImageNet weights fine-tuned on e-commerce retail product domain datasets.

Customer Image Ingestion Journey

 Multi-Channel Input

Supports camera snapshots, saved gallery photos, and direct social media screenshots.

 Auto-Cropping & Bounding Box

Detects multiple items within a single photograph, allowing user segment selection.

Multidimensional Feature Extraction

Geometry & Shape

Extracts structural contours and 3D aspect ratios.

Color Histogram

Maps RGB/HSV dominant color distribution vectors.

Surface Texture

Identifies fabric weaves, metallic sheen, and matte finishes.

Visual Pattern

Detects stripes, polka dots, grid prints, and floral motifs.

Brand Logo

OCR and visual template matching for brand emblems.

Object Class

Categorizes item type (e.g., Wireless Earbuds vs Smartwatch).

Vector Embeddings & Cosine Similarity Search

Cosine Similarity Equation

$$\text{Similarity} = (A \cdot B) / (||A|| \cdot ||B||)$$

Measures vector angle cosine between 512-dimensional image embeddings to determine visual identity.

Vector Database Architecture

- ✓ **FAISS / Milvus:** Sub-50ms vector query responses across millions of catalog items.
- ✓ **HNSW Indexing:** Hierarchical Navigable Small World graphs for fast nearest neighbor search.

Visual Similarity Search Network

Graph Clustering

Groups visually identical products together in vector space for fast retrieval.

High-Throughput Index

Handles 50,000 parallel visual queries per second during peak shopping events.

AI Visual Recommendation System

Complete the Look

Recommends visually matching accessories (e.g., matching handbag with searched shoes).

Cross-Category Upsell

Identifies premium design alternatives in stock with higher profit margins.

Traditional Search vs. AI Visual Search

Feature Dimension	Traditional Keyword Search	AI Visual Search Engine
Input Mode	Manual Text Typing	Photo / Image Upload
Query Duration	15 – 90 seconds	< 0.2 seconds
Attribute Match Precision	62% Average Match	87% Vector Precision
Search-to-Cart Conversion	28% Conversion Rate	85% Conversion Rate

Amazon Visual Search Journey Map

Business Impact Analysis & Waterfall Lift

Conversion Lift

+57% net increase in mobile conversion compared to text keyword searches.

Basket Size Growth

+22% Average Order Value (AOV) through automated visual cross-selling.

Zero Search Latency

Customer session length reduced by 44.8%, accelerating checkout speed.

Power BI Executive Strategic Dashboard

Rapid capital recovery driven by high-volume mobile traffic conversion.

\$2.4M

3-Year NPV

Net Present Value discounted at 10% corporate cost of capital.

AI Governance Pyramid & ISO 27001 Controls

Slide 31

ISO 27001 Control 5.34 (PII Protection)

Strips EXIF metadata and facial features before image embedding vectorization.

ISO Control 8.24 (Encryption)

AES-256 encryption at rest and TLS 1.3 transit encryption for image feeds.

GDPR Compliance

Automatic image purge post-session adhering to GDPR Article 6 consent.

Responsible AI Framework

Fairness

Unbiased model training across diverse skin tones and product visual styles.

Transparency

Clear visual match score indicators provided to shoppers.

Privacy

Zero personal image retention after search session conclusion.

Security

Protection against adversarial image attack vectors.

Explainability

Grad-CAM heatmaps explaining why products were visually matched.

Oversight

Human-in-the-loop auditing for low confidence visual matches.

Business Value Realization Roadmap

Strategic Implementation Roadmap (Gantt)

Future Directions & Strategic Conclusion

Slide 35

Future Horizons

Multimodal generative search, real-time spatial computing, and federated edge AI models.

Strategic Takeaway

AI visual search is no longer a feature—it is the foundational entry point for modern digital commerce.

TURN YOUR STANDARD FRIDGE INTO AN AI SMART FRIDGE

Fast retrofit solution for intelligent retail, automated checkout, and smart inventory management.

AI UPGRADE COMPONENTS

- Power Module
- AI Vision Camera
- Edge Computing Box
- 4G / Wi-Fi Router
- Smart Payment Terminal

UPGRADE

- AI Recognition
- Self-Service Payment
- Real-Time Inventory
- Quick Retrofit

WEIMI 微米 AI Fridge

UNMANNED RETAIL
Reduce labor costs

24/7 OPERATION
Always open, always selling

SMART MANAGEMENT
Remote monitoring and analytics
